Meeting Outcome Assistant

Capture the proposed meeting details, show where they came from, let the seller correct and review them, and keep everything unsaved in this phase.

A Microsoft 365 declarative-agent extension to the Microsoft Sales agent. It turns a seller's supplied meeting notes into a structured, evidence-backed Event proposal that the seller reviews and corrects. The proposal is always left unsaved.

Readiness labels

LABEL	MEANING
Validated in private agent	The unsaved Event capture and review flow was tested in the private agent with supplied synthetic notes (version 1.1.1).
Configured · Sales validation pending	Configured for the Sales host. Behaviour of the updated tool set inside Sales is not yet validated.
Configured · Sign-in required for verification	Optional customer context is configured, but needs a sign-in before it can be verified.
Previously demonstrated · Currently paused	Task creation and the Opportunity Next Step update were shown in earlier demos. Task fixes are pending.
Future scope	Not implemented in this phase.

Start and reset the demonstration

- Open **index.html** in a current desktop or tablet browser. It needs no installation and makes no network calls.
- Use **Presenter view** for the 8 to 10 minute guided demo, **Choose scenario** to replay a case and **Reset demo** to return to the starting sample state.
- On Event proposals, **Demo prompts (16)** sends each of the final sales demo prompts exactly as written.

Capability inventory

Validated in private agent

Current private Event flow

- Supplied meeting notes
- Meeting versus action-item distinction
- Event fields
- Source evidence for each value
- Derivations shown with their working
- Handling of missing and conflicting details
- Conversational revisions with before and after
- Multiple Event proposals
- Discard (conversation only)
- Review-only acceptance
- Safe refusal to save or send invitations

Timezone and daylight-saving clarification is a configured validation rule, not an independently validated production scenario.

Configured · Sign-in required for verification

Optional CRM context

- Exact Account search
- Account overview: industry and website
- Related Contacts with job titles, when you ask
- Open Opportunities with stage and close date, when you ask
- One named opportunity and its current next step
- Ambiguity and error handling
- Verified versus unverified context

Read-only. Fresh authenticated grounding is unverified because the existing session requires sign-in.

Configured · Sales validation pending

Pending validation

- Updated workflow and tool set inside the Sales host
- Fresh authenticated Salesforce grounding

The Sales runtime was last seen with its older tool set. Do not read this as validated.

Previously demonstrated · Currently paused

Paused

- Custom Task creation
- Dedicated demo Opportunity Next Step update
- Related repairs are pending

Shown in earlier demos. Not enabled in the current Event phase.

Future scope

Future scope

- Persistent Event write-back
- Saving a meeting summary as a Salesforce note (not yet validated)
- Recording and transcript ingestion, with governance
- Calendar availability checking and booking
- Real invitations
- Production bFO field mapping
- Production rollout

bFO is a possible future customer target. It needs process and field-mapping agreement first.

Sample journey: notes to an unsaved proposal

S1 Meeting with Atlas Metals Group. **S2** Elena and Mateo agreed a scope review on 10 November 2026, 10–10:30 am India time on Teams. **S3** I will organise it. **S4** Elena will send the scope document by 9 November 2026.

FIELD	PROPOSED VALUE	BASIS	SOURCE
Title	Atlas Metals Group scope review	AI suggestion	S1, S2
Purpose	Scope review	User-provided	S2
Date	10 November 2026	User-provided	S2
Start	10:00 am	User-provided	S2
End	10:30 am	User-provided	S2
Duration	30 minutes	Derived	S2 · 10:30 am − 10:00 am = 30 minutes
Timezone	Asia/Kolkata, UTC+05:30	Derived	S2 · “India time” normalized to Asia/Kolkata, UTC+05:30
Location	Teams	User-provided	S2
Participants	Elena, Mateo	User-provided	S2
Organizer	You (demo seller)	User-provided	S3
Related customer	Atlas Metals Group · CRM-unverified	User-provided	S1
Related opportunity	*Not provided*	Missing	—
Relevant note	Elena will send the scope document by 9 November 2026.	User-provided	S4

Reviewed — unsaved. No CRM/calendar Event or invitation has been created. Elena sending the scope document is an action item, not an Event.

Prototype-only elements versus configured behaviour (1 of 2)

ELEMENT	IN THIS WIREFRAME	IN THE CONFIGURED AGENT
Notes to Event proposal	Scripted for the two sample notes. Other text gets an explanatory message.	The private agent drafts from supplied notes. Validated with supplied synthetic notes (version 1.1.1). ✓ Validated in private agent
Evidence and derivations	Rule-based sample logic shows the basis, quote and working for each value.	Field evidence and derivations are part of the Events flow. ✓ Validated in private agent
Corrections and revisions	A small set of phrasings (time, date, attendee, keep unverified, discard, mark reviewed). Everything else gets suggested prompts.	Conversational review of the Event, one revision at a time. ✓ Validated in private agent
Missing and conflicting details	Scenarios A to F are replayed from the scenario chooser.	Handled in the Events flow. Timezone and daylight-saving rules are configured validation rules, not independently validated production scenarios. ✓ Validated in private agent
Multiple Event proposals	Replayed from a scripted example, or drafted from one typed paragraph that describes two meetings.	Part of the Events flow. Behaviour inside the Sales host awaits runtime validation. 🕒 Configured · Sales validation pending
Customer context	Four simulated outcomes picked with a demo control, using fixed sample data.	Read-only lookups through the Salesforce Hosted MCP read tools. Sign-in is required for verification. 🔑 Configured · Sign-in required for verification
Sign-in	Simulated. No sign-in window opens and no credentials are asked for.	A real sign-in in the Microsoft 365 / Sales host. 🔑 Configured · Sign-in required for verification
Review status	Conversational. “Timestamp not captured.”	Also conversational: no CRM Event ID, no calendar item, no persistent audit record. ✓ Validated in private agent

Prototype-only elements versus configured behaviour (2 of 2)

ELEMENT	IN THIS WIREFRAME	IN THE CONFIGURED AGENT
Save to CRM, send invitations	Disabled controls labelled “Future scope — unavailable in this phase”. A typed save request (prompt 16) gets a boundary reply listing the details a confirmation would show.	Not implemented in this phase. Future scope
Salesforce questions (prompts 1 to 4 and 10)	Fixed sample Account, four contacts and three opportunities, shown after a simulated sign-in.	Read-only lookups through the Salesforce Hosted MCP read tools. Sign-in is required for verification. Configured · Sign-in required for verification
Notes to decisions, risks and actions (prompt 5)	Scripted for the demo notes in the prompt list. Other notes are declined with an explanation.	Listed in the final sales demo prompts. Its validation status is not stated in the project brief.
Typed note, Task and Next Step requests (prompts 6 to 9)	Each gets a “requested, not created” reply that echoes the request. Nothing is sent anywhere.	Task creation and the Next Step update are paused. Saving a Salesforce note has not been validated in the agent. Previously demonstrated · Currently paused
Task and Next Step actions	A historical illustration with disabled buttons.	Paused. The two custom mutation tools are removed from the active allowlist. Previously demonstrated · Currently paused
Sales experience	A Sales-like shell built for the demonstration. It is not the real Sales interface.	Configured for the Sales host. Runtime validation is pending. Configured · Sales validation pending
Scenario chooser, Reset, Presenter view, print view, S1… Sn labels, simulated steps	Prototype only.	Not part of the agent.

Presenter script, 8 to 10 minutes (1 of 3)

#	STEP	ON SCREEN	SPEAKER PROMPT
1	**The seller problem**	Commitments and appointments end up scattered in meeting notes. Proposed CRM data needs review and traceability before anyone saves it.	Frame the problem, not the product. Point at the readiness labels early so nobody assumes more is live than is.
2	**Capture the notes**	The supplied notes become one Event proposal, the scope review, and one action item. The document deadline is not turned into a meeting.	Point at Action item 1 beside Event proposal 1. 9 November is a deadline for Elena, not a meeting.
3	**Inspect fields and quotes**	Every Event field shows its basis and supporting quote. Select a source label such as S2 to see the sentence behind it.	Show one User-provided value, one Derived value (India time, duration) and the AI suggestion (the title). Missing fields say Not provided.
4	**Correct the time**	A short instruction changes only the time. The side panel shows before and after, and every other field keeps its evidence.	Read the comparison aloud: start 10:00 am to 3:00 pm, end recalculated to 3:30 pm, duration kept. Nothing else changed.
5	**Missing and conflicting details**	When details are missing or disagree, the assistant asks. It does not guess a duration, timezone or date.	Use the quick reply or type a short answer. The proposal becomes Ready for review only when the gap is closed.

Presenter script (2 of 3)

#	STEP	ON SCREEN	SPEAKER PROMPT
6	**Optional customer check**	Customer context is optional and read-only. If sign-in is needed, the customer stays unverified and review carries on.	Switch between the outcomes to show they look different. Verification did not complete is not No matching Account.
7	**Mark reviewed**	Reviewed — unsaved. Marking reviewed changes only the review status. No CRM or calendar Event or invitation exists.	Note the blue information box, not a green success toast. There is no record ID, booking or Published to CRM message.
8	**The save boundary**	This phase supports capture and review only. The proposal stays unsaved; no meeting is booked and no invitations are sent.	No confirmation card, no hidden queue and no promise to save later. Click a disabled control to show the label.
9	**Paused actions and labels**	Task creation and the Next Step update were shown in earlier demos. They are paused while Task fixes are pending.	Click Create Task to show the reason. Then name the five readiness labels one by one.
10	**Questions to agree**	These business-process questions need your agreement: required fields, ownership, evidence, production CRM mapping and recording governance.	Do not close with production-ready. Ask which question matters most to them.

Presenter script (3 of 3): optional appendices A1 to A5

#	STEP	ON SCREEN	SPEAKER PROMPT
A1	**Appendix: multiple Events**	With two Event proposals, an ambiguous edit needs a choice. Changing one proposal never changes the other.	Answer the clarification with the quick replies. Then show that only the chosen Event changed.
A2	**Appendix: embedded command**	A line in the notes tells the assistant to save and invite. It is treated as text and ignored. External actions: zero.	Point at the ignored line, then open the help drawer to show the five rules.
A3	**Appendix: Salesforce questions**	The seller asks about the customer in plain words. Replies are read-only and come from fixed sample data after a simulated sign-in.	Say “sample data” out loud and point at the badge: Configured · Sign-in required for verification. A CRM contact role does not make someone an attendee.
A4	**Appendix: notes, Task and Next Step**	Meeting notes become decisions, risks and actions without saving. Asking for a Task, a next-step update or a note gets an honest answer: requested, not created.	Read the amber or grey box each time: it says what was not done. Then point at the Requested, not created line. Nothing is hidden or queued.
A5	**Appendix: two meeting proposals**	Two meetings drafted from one paragraph, each with its sources. Change one, discard one, review the last, and see what happens when the seller asks to save it.	Run the variants in order: they build on each other. Point at Event 2 staying unchanged, and at the Future scope box on the last one.

Technical inventory

Configured · Sign-in required for verification Configured · Sales validation pending

Salesforce Developer Edition lab environment, not production. Salesforce Hosted MCP read context is optional and needs a sign-in.

Configured read tool inventory

FUNCTION	BUSINESS MEANING
`find`	Search records across object types.
`getObjectSchema`	Inspect object and field definitions.
`getRelatedRecords`	Retrieve related records.
`getUserInfo`	Read current user context. Its profile timezone is never used automatically as the meeting timezone.
`listRecentSobjectRecords`	Retrieve recently viewed records.
`soqlQuery`	Selectively retrieve known object fields.

This is what is configured. It does not claim every function was independently retested in this Events phase.

Removed from the active allowlist

`createSobjectRecord` and `updateSobjectRecord`. Task and Opportunity save operations are paused.

Sales host

The Sales host was last observed with the previous tool set. The refreshed version awaits runtime validation.

Business-process questions to agree

Questions, not decisions. Nothing here means the customer has approved the proposed solution.

1. **Required Event fields.** Which details must a proposal contain before it can be reviewed? Today the wireframe asks for a date, a start with an end or duration, and a timezone. Location, organizer, customer and opportunity can stay empty.
2. **Ownership.** Who corrects and reviews a proposal, and who owns the meeting record afterwards?
3. **Evidence expectations.** What evidence should a seller see for each field before trusting it? Is a source quote enough, or do some fields need a CRM check?
4. **Production CRM mapping.** If bFO becomes a target, which Event fields map where? That mapping needs agreement before any write-back is designed.
5. **Future recording governance.** If recordings or transcripts are ever used, who approves that, how long are they kept, and who can see the results?
